

Apache Kafka (Event Streaming Platform)

What is an Event Streaming Platform?

- Producers and Consumers subscribe to a stream of records

- Store stream of Events

- Analyze and Process Events as they occur

Kafka-Example with Spring Boot

- The best way to learn is an example with source code
- **Kafka-Example** with Spring Boot is on my **GitHub** for you:
<https://github.com/Milan-Karajovic/Kafka-Example-with-SpringBoot>

Milan Karajovic

How to run Kafka application from my GitHub which I shared with you?

1. Run docker version of Kafka-Brokers and Zookeeper with command:

```
docker-compose -f docker-compose-multi-broker.yml up
```

2. Run demo-kafka-producer

3. Run demo-kafka-consumer

4. Use Postman collection to send a message to the producer
